

AMERICAN ACADEMY OF
FAMILY PHYSICIANS
STRONG MEDICINE FOR AMERICA

February 9, 2012

Dear Scandinavian Family Physicians:

The American Academy of Family Physicians is pleased to invite you to join us at our 2012 Annual Scientific Assembly, which will be held in Philadelphia, Pennsylvania, 17-20 October 2012. Each year, this event is attended by more than 14,000 people including physicians, others involved in the health professions and commercial medical exhibitors. I am sure you will find it most interesting and of great value to your clinical practice!

Come to a new and exciting 2012 Scientific Assembly in historic Philadelphia! There will be more opportunities to take the courses you want, and all CME is free of charge except the Clinical Procedures Workshops, which require an extra fee. There are over 300 CME course offerings, and all sessions are 60 minutes in length so you can better maximize your time and topic choices, and most are evidence-based. CME sessions are being offered beginning on Wednesday afternoon, 17 October, and CME categories have been enhanced to best fit your learning preference. All courses are 60 minutes in length, and you can choose among didactic lectures, interactive lectures and "blast presentations" (three, 15-minute presentations on updates on emerging topics). Plenaries are scheduled on Thursday, 18 October and Friday, 19 October and will focus on you as a practicing physician and finding balance in medical life.

The AAFP remains most interested in issues of international family medicine and is a very active member of Wonca, the World Organization of Family Doctors. Each year, visitors from beyond the shores of the United States participate in our Scientific Assembly and consider the meeting to be a cost-effective means of communication with colleagues from around the world and obtaining personal continuing medical education.

We very much hope that you will join us in Philadelphia in October and take advantage of this opportunity for an excellent session of high quality continuing medical education.

Sincerely,

Daniel J. Ostergaard, MD
